| Nagercoil, Tamil Nadu, India

PROFESSIONAL SUMMARY

Detail-oriented Frontend Developer with nearly 2 years of professional experience in building scalable, high-quality web applications. Proficient in React.js, Next.js, and TypeScript, with a strong focus on component-based architecture, performance optimization, and clean, maintainable code. Contributed to improving application responsiveness and user engagement through efficient state management, code refactoring, and caching strategies. Demonstrates strong problem-solving abilities and the capacity to work independently on production-grade applications supporting thousands of active users with high availability and reliability.

EXPERIENCE

Senior Web Developer

April 2024 – Present

Matt Engineering Solutions

Nagercoil, Tamil Nadu

- Led web development of humanitarian platform for Libyan client, implementing performance optimization techniques improving user engagement by 40 percent and reducing load time by 25 percent through advanced caching strategies
- Built scalable, responsive web interfaces using client frameworks including Next.js, TypeScript, and Tailwind CSS serving 10,000+ concurrent users meeting design specifications
- Designed and implemented reusable components library through component development improving code maintainability by 30 percent and accelerating development cycles across multiple projects
- Optimized application performance through code optimization, implementing client-side caching, lazy loading, and functionality optimization reducing server load by 35 percent
- Integrated Redux Toolkit for complex application state management across large-scale applications writing maintainable code
- Connected frontend with backend APIs using Prisma ORM and PostgreSQL with 99.9 percent uptime, handling 100,000+ database records through independent work
- Developed modular UI components using Material UI and shadcn/ui applying problem solving skills, reducing UI-related bugs by 50 percent
- Established Git branching strategies and code review processes through independent work, reducing merge conflicts by 60 percent
- Mentored two junior developers on React ecosystem, modern frontend practices, and coding standards demonstrating leadership in component development

PROJECTS

Nanjil Varankal Matrimonial Website | *Next.js, Prisma, PostgreSQL*

2025 – Present

- Designed and developed a secure full-stack matrimonial platform using Next.js App Router, Prisma ORM, and PostgreSQL, implementing role-based access control for Admin and User with complete route protection.
- Implemented JWT-based authentication and authorization, ensuring strict separation of admin and user access, protected API routes, and secure credential handling for admin-created user accounts.
- Built an intelligent matchmaking system applying gender-based filtering and DOB-driven eligibility rules, dynamically serving compliant profiles with controlled data exposure to preserve user privacy.
- Developed a notification workflow backed by the database, enabling real-time admin alerts when users accept profiles, along with comprehensive admin dashboards for user management and monitoring.
- Created a responsive, production-ready UI using Material UI, delivering optimized dashboards and profile browsing experiences across devices with clean component architecture.

AI Empowered Franchise Coach Website | *Next.js, SEO Optimization, Prisma, PostgreSQL, Sanity CMS*

2025

- Designed and developed an AI-empowered Franchise Coaching web platform targeting high-net-worth entrepreneurs (₹10L+ annual revenue) to enable scalable franchise onboarding and business expansion.
- Built a high-performance frontend using Next.js, React, JavaScript, Tailwind CSS, HTML, and CSS, ensuring responsive UI, fast load times, and SEO-optimized pages.
- Implemented a robust backend architecture using PostgreSQL with Prisma ORM, enabling secure data management, scalable queries, and maintainable database models.
- Integrated Sanity CMS for the admin panel, allowing real-time updates of logos, banners, headings, offers, and content, with changes reflected instantly on the live website.
- Delivered a production-ready, scalable solution aligned with premium business coaching workflows, supporting dynamic content management and future AI feature expansion.

- Matt Scholar Solutions Corporate Website** | *React.js, SEO Optimization, Component Architecture*

2024
- Built SEO-optimized, responsive corporate website through web development improving search visibility by 60 percent using reusable components and maintainable code
 - Created scalable component architecture through coding best practices reducing future development time and enabling rapid feature deployment

TECHNICAL SKILLS

Frontend Technologies: HTML5, CSS3, JavaScript ES6+, React.js, Next.js, Tailwind CSS, Material UI, shadcn/ui
Web Development & Coding: Component development, reusable components, maintainable code, code optimization, client frameworks
Performance Optimization: Caching strategies, client-side caching, code splitting, lazy loading, functionality optimization
Backend Technologies: Node.js, Prisma ORM, REST APIs, API integration
Databases: PostgreSQL, database optimization
Development Tools: Git, GitHub, VS Code, Webpack, npm, Chrome DevTools
Development Practices: Agile methodology, Scrum, Test-Driven Development, code review, CI/CD pipeline, responsive design

EDUCATION

Ponjesly College of Engineering
Bachelor of Engineering in Mechanical Engineering

Kanyakumari, Tamil Nadu
July 2012 – May 2016

CORE COMPETENCIES

Problem Solving: Complex technical challenges, debugging, performance bottlenecks, system architecture design
Independent Work: Self-directed project management, autonomous feature development, remote collaboration
Technical Leadership: Code review, mentoring junior developers, establishing coding standards and best practices
Communication Skills: Technical documentation, stakeholder presentations, cross-functional team collaboration

KEY ACHIEVEMENTS

Performance Optimization: Drove a 40 percent increase in user engagement and cut page load times by 25 percent through targeted performance tuning and efficient rendering strategies.
Code Quality & Reliability: Lowered UI defect rates by 50 percent by implementing modular component architecture and enforcing clean, maintainable coding standards.
Scalable Application Development: Engineered high-availability web applications supporting over 10,000 concurrent users with 99.9 percent uptime by leveraging robust caching and optimization techniques.
Maintainability & Reusability: Enhanced long-term code maintainability by 30 percent through reusable component libraries and standardized development practices.
Technical Mentorship: Guided and mentored two junior developers in React.js and modern frontend workflows, improving team productivity and code consistency.
